

AirSoap

AirSoap's Electric Wind™ technology generates plasma and ionic fields to kill germs and trap dust and debris down to 14.6 nanometers. That's 20x more effective than traditional HEPA based filters and is able to capture even the tiniest of viruses. With washable, dishwasher safe collecting plates made of plastic polymer and graphene oxide, AirSoap is both cost-effective and environmentally friendly.

Key Features

- Whisper quiet
- Washable collecting plates
- Low energy consumption

Whisper Quiet

Nearly silent operation keeps your air clean without noise pollution.

Collection Plates

Washable collection plates reduce waste and save money.
